Cybersecurity Incident Management - Tabletop Exercise

Course code: GOC251

In this one-day course, we will walk participants through the individual steps of detecting, managing, resolving, reporting and evaluating cyber security incidents using practical examples from small and large corporate environments. The course is conducted in a table-top exercise style, meaning the lecturer presents questions that arise in a hypothetical cyber incident situation and, together with the participants, considers options for how to proceed. The aim is for the participants to actually realize and justify what is appropriate to do in the individual phases and what mistakes to avoid before a cyber incident even occurs.

Assumed entry knowledge

Awareness and basic knowledge within the scope of the courses listed in the **Previous courses** and **Related courses** sections

Course outline

- Incident management according to the American NIST 800-61
- Incident life cycle
- Roles of employees and their responsibilities
- Policies, processes and procedures in general
- Incident preparation
- Detection and security awareness (detection, awareness)
- Tasks of individual workers and users (roles and responsibilities)
- Internal incident reporting (communication)
- Initial incident analysis and response (identification, analysis)
- Communication within the organization, asset and risk guarantors, management (communication, owners, governance)
- (Pre)approval of interventions and procedures during the incident (notification, response)
- Prevention of further spread (containment)
- Mitigation (mitigation)
- Eradication and cleaning of the infection (eradication)
- Reporting to authorities (reporting)
- Recovery and return to operation (recovery)
- Prevention of recurrence (remediation)
- Lessons learned from the crisis development (lessons learned) learned)
