

Enterprise Architecture using the TOGAF® Standard, 10th Edition (L1+L2)

Course code: TOGAF3

By completing the course, you can gain knowledge and a basic understanding of business architecture guided strategically and taking into account long-term trends - business efficiency, agility, digital transformation, security. Acquired competences practically enable: understand the context and common "language" in understanding the content of The TOGAF® Standard and TOGAF® BoK prepare for and perform the TOGAF Enterprise Architecture Foundation certification. Certification exams are included in the course price. This is a combined Foundation and Practitioner training

Who is the course for

Participants are typically those who will want to understand a proven methodology for enterprise architecture or have started working for an enterprise where The TOGAF® framework is applied. This provides a way for them to effectively familiarize themselves with the approach of this framework.

Examples of participants:

- I am an enterprise architect and I need to be certified for The TOGAF® Standard as well
- I am an enterprise architect and I need to know the EA methodology
- I am not an architect and I want to become one
- I am an architect, but not a corporate architect and I want to become one

Required skills

- Basic knowledge of architecture (ICT, Business, Security) / Quality Assurance / Project Management / Service Operations
- Advanced knowledge of English (training materials and certification tests are in English)
- Full concentration and attention during training, willingness to interact when discussing the subject, proactive approach, cooperation
- Responsible approach to preparation and individual exercises assigned by tutor

Teaching methods

Professional explanation with practical samples and examples.

Teaching materials

The attendance fee includes teaching, use of computer technology, study materials for accredited training, and a certificate of completion of the training.

Outline

Introduction to TOGAF and Enterprise Architecture (EA)

Explanation of the fundamental concepts and principles of Enterprise Architecture (EA).

Introduction to the role of architecture in strategic management (business and IT) and its value for the enterprise.

Architecture Development Method (ADM) using TOGAF

ADM is the core method of TOGAF, offering a structured approach to designing, developing, and managing architecture.

The training covers all phases of ADM, from the introduction and definition of techniques, goals, and vision, to the implementation and support of the architecture.

Enterprise Continuum and Architectural Models

An overview of the Enterprise Continuum, a robust mechanism that helps classify and organize various architectural resources, standards, and patterns.

Participants will also learn to navigate the TOGAF Reference Models, which provide templates and best practices.

TOGAF Techniques and Tools

The training includes specific techniques for analyzing, documenting, and optimizing architectural solutions.

Participants will gain an overview of the tools that can be used to create and manage architecture.
