

Python - BigData and Hadoop

Course code: PYTHON_BIGDATA

The concept of Big Data is now reflected in many areas and sectors of the national economy and therefore it is necessary not only to gain theoretical knowledge but also practical experience in processing large amounts of data.

Who the course is for:

- Data Scientist, data analysts, especially in the Big Data environment, is the primary auditor for this intensive course.
- Software developers who are familiar with Python at least at intermediate and advanced levels and aim to create data-intensive allocations using the SPARK Big Data (Cloud) engine.
- Data architects

Required skills:

- Basic knowledge of Python at the PYTHON_INTRO level

Teaching methods:

- Professional explanation with practical samples and examples.

Teaching materials:

- Powerpoint handouts and module printouts.

Course syllabus:

Hadoop Distributed File System (HDFS) and Python

- MapReduce technology in Python
- Pig and Python
- Spark / Yarn in Python
- Configure the virtual environment for Spark
- Creating Batch and Streaming Applications with Spark
- Juggle 's data using Spark
- Fundamentals of machine learning from data using Spark
- Streaming "live" data with Spark
- Data visualization
- Workflow Management in Python (Oozie)
