

# iSAQB Foundation (Mastering Software Architectures)

Course code: ISAQB\_CORE

a solid, practical and pragmatic introduction to architecture with lots of exercises. You will learn and practise the different tasks of software architects using an extensive case study. The focus is on a methodical and systematic approach to architectural design and evaluation. You will receive concrete tips on how to proceed in development projects, supported with practical examples. Ideal preparation for the iSAQB CPSA-F exam

This training is accredited by iSAQB and covers the complete curriculum of CPSA Foundation Level. Therefore, besides offering a high degree of practice our seminar Mastering Software Architecture offers an ideal and effective way to prepare yourself for the iSAQB CPSA Foundation Level certification. We have successfully prepared more than 3000 persons for the exam in the last couple of years.

## Who is the course for

This course is primarily for developers and architects that want to understand the role "software architect" and learn about their tasks and skills.

If you are project manager, product manager, product owner or Scrum coach? You will get an easy to understand introduction to software architecture so that you and your development teams will be able to communicate in a common language.

## Information about the iSAQB CPSA-F exam

We organize the exam for you, and (optionally) reserve a seat for the exam. The fee for the exam (currently € 250,- + VAT - where applicable) will be sent to you after the course. You don't need to do anything explicitly - you can cancel your interest in the exam even during the seminar.

## Course outline

### Introduction and Motivation

- Tasks, role and responsibilities of software architectures
- Architecture in the development process
- Clarifying Requirements & constraints
- Deriving architectural or quality goals

### Documentation of Architecture

- Goals and requirements for architecture documentation
- Typical architecture documents
- Architectural views

### The Architecture Development Process

- Methodological tools for developing software architecture
- developing business architectures
- Domain Driven Design
- Quality Driven Design: tactics and practices to achieve quality goals
- Top Down vs. Bottom Up Approaches

### Architectural Views

- Building Block View: Building Blocks & Interfaces
- Runtime View: describe processes and scenarios
- Deployment View: Infrastructure and deployment of building blocks to it

### Cross-cutting Concepts

- conceptual design

### Patterns and Principles

- Architecture and Design Patterns
- Fundamental Design Principles
