

Veeam Backup and Replication Hands-On Session

Course code: VEE_VMCEHO

The session provides practical, guided experience in a lab environment to reinforce the theoretical knowledge from the course and prepare participants for real-world deployment, operations, and certification.

Who is the course for

This instructor-led hands-on lab session is designed for customers who have completed the self-paced Veeam Backup and Replication training, whether through the Veeam Learning Subscription or by purchasing the standalone Veeam Backup and Replication self-paced course or an option to retake labs if visited the Veeam Backup and Replication instructor led course.

What we teach you

- Gain hands-on experience with key VMCE-level tasks
- Validate and reinforce theoretical knowledge from the subscription
- Prepare for operational use of Veeam in real-world environments
- Embed learning from the VMCE ILT course and e-Learning subscription courses to prepare for the VMCE+ certification exam
- Receive a Certificate of Attendance from TD SYNEX

Required skills

- Certificate of completion from the self-paced Veeam Backup and Replication training.
- Students should have fundamental IT experience working with networking, servers, storage, cloud, virtualization and operating systems. To get the most out of this course, students should be familiar with the core fundamental concepts of Veeam Backup & Replication through hands on experience.

Course outline

Environment Overview

- Brief recap of Veeam Backup & Replication components
- Orientation of the lab setup and topology

Backup Job Configuration

- Create and configure image-level backup jobs for VMs
- Set up application-aware processing
- Schedule and chain jobs
- Backup repository setup and management

Recovery Operations

- Full VM recovery
- Instant VM Recovery
- File-level restore (Windows/Linux)
- Application item recovery (Exchange, SQL, Active Directory)

Backup Copy and Replication

- Configure backup copy jobs with GFS retention
- Set up replication jobs to a secondary site
- Simulate failover and failback operations

SureBackup and Restore Testing

- Create a virtual lab and application group
- Configure and run a SureBackup job
- Perform automated backup verification

Monitoring and Troubleshooting (Optional Advanced Segment)
