Building AI Agents with a practical deep dive into Microsoft's new AI Red Teaming Agent

Course code: WAIA

Al Red Teaming relies on the creative human expertise of highly skilled safety and security professionals to simulate attacks. The process is resource and time intensive and can create a bottleneck for many organizations to accelerate Al adoption. With the Al Red Teaming Agent, organizations can now leverage Microsoft's deep expertise to scale and accelerate their Al development with Trustworthy Al at the forefront.

Outline:

- Definition and types of Al agents
- Real-world applications and use cases
- Discussion: The role of Al agents in modern technology
- Understanding AI red teaming and its importance
- Overview of Microsoft's Al Red Teaming Agent
- Key features: automated scans, attack strategies, and reporting
- Supported risk categories and attack techniques
- Installing necessary tools and dependencies
- Configuring Azure Al Foundry and the Al Red Teaming Agent
- Running scans on a sample AI model
- Final Project: Build an Al Agent to perform Network Exploitation tasks

Prerequisites:

- Basic understanding of AI and machine learning concepts
- Azure MS account

Who Should Attend?

All engineers, ML practitioners, security researchers, and technical decision-makers who want to integrate Trustworthy All and proactive testing into their development pipeline.
