

# Running Containers on Amazon Elastic Kubernetes Service (Amazon EKS)

Course code: AWSRCAE

Amazon EKS makes it easy for you to run Kubernetes on AWS without needing to install, operate, and maintain your own Kubernetes control plane. In this course, you will learn container management and orchestration for Kubernetes using Amazon EKS. You will build an Amazon EKS cluster, configure the environment, deploy the cluster, and then add applications to your cluster. You will manage container images using Amazon Elastic Container Registry (ECR) and learn how to automate application deployment. You will deploy applications using CI/CD tools. You will learn how to monitor and scale your environment by using metrics, logging, tracing, and horizontal/vertical scaling. You will learn how to design and manage a large container environment by designing for efficiency, cost, and resiliency. You will configure AWS networking services to support the cluster and learn how to secure your Amazon EKS environment.

Affiliate	Duration	Course price	ITB
Praha	3	990 €	0
Brno	3	990 €	0
Bratislava	3	1 650 €	0

The prices are without VAT.

## Course terms

Date	Duration	Course price	Type	Course language	Location
------	----------	--------------	------	-----------------	----------

The prices are without VAT.

## Who is the course for

Those who will provide container orchestration management in the AWS Cloud including:

- DevOps engineers
- Systems administrators

## What we teach you

- Review and examine containers, Kubernetes and Amazon EKS fundamentals and the impact of containers on workflows.
- Build an Amazon EKS cluster by selecting the correct compute resources to support worker nodes.
- Secure your environment with AWS Identity and Access Management (IAM) authentication by creating an Amazon EKS service role for your cluster deploy an application on the cluster. Publish container images to ECR and secure access via IAM policy.
- Automate and deploy applications, examine automation tools and pipelines. Create a GitOps pipeline using WeaveFlux.
- Collect monitoring data through metrics, logs, tracing with AWS X-Ray and identify metrics for performance tuning. Review scenarios where bottlenecks require the best scaling approach using horizontal or vertical scaling.
- Assess the tradeoffs between efficiency, resiliency, and cost and impact for tuning one over the other. Describe and outline a holistic, iterative approach to optimizing your environment. Design for cost, efficiency, and resiliency
- Configure the AWS networking services to support the cluster. Describe how EKS/Amazon Virtual Private Cloud (VPC) functions and simplifies inter-node communications. Describe the function of VPC Container Network Interface (CNI). Review the benefits of a service mesh.
- Upgrade your Kubernetes, Amazon EKS, and third party tools.

## Required skills

- Completed Amazon Elastic Kubernetes Service (EKS) Primer
- Completed AWS Cloud Practitioner Essentials (or equivalent real-world experience)
- Basic Linux administration experience

# Running Containers on Amazon Elastic Kubernetes Service (Amazon EKS)

- Basic network administration experience
- Basic knowledge of containers and microservices

## Course outline

Day 1

Module 0: Course Introduction

Course preparation activities and agenda

Module 1: Container Fundamentals

Best practices for building applications

Container fundamentals

Components of a container

Module 2: Kubernetes Fundamentals

Container orchestration

Kubernetes objects

Kubernetes internals

Preparing for Lab 1: Deploying Kubernetes Pods

Module 3: Amazon EKS Fundamentals

Introduction to Amazon EKS

Amazon EKS control plane

Amazon EKS data plane

Fundamentals of Amazon EKS security

Amazon EKS API

Module 4: Building an Amazon EKS Cluster

Configuring your environment

Creating an Amazon EKS cluster

Demo: Configuring and deploying clusters in the AWS Management Console

Working with eksctl

Preparing for Lab 2: Building an Amazon EKS Cluster

Day 2

Module 5: Deploying Applications to Your Amazon EKS Cluster

Configuring Amazon Elastic Container Registry (Amazon ECR)

Demo: Configuring Amazon ECR

Deploying applications with Helm

Demo: Deploying applications with Helm

Continuous deployment in Amazon EKS

GitOps and Amazon EKS

Preparing for Lab 3: Deploying App

Module 6: Configuring Observability in Amazon EKS

Configuring observability in an Amazon EKS cluster

Collecting metrics

Using metrics for automatic scaling

# Running Containers on Amazon Elastic Kubernetes Service (Amazon EKS)

Managing logs  
Application tracing in Amazon EKS  
Gaining and applying insight from observability  
Preparing for Lab 4: Monitoring Amazon EKS  
Module 7: Balancing Efficiency, Resilience, and Cost Optimization in Amazon EKS  
The high level overview  
Designing for resilience  
Designing for cost optimization  
Designing for efficiency  
Day 3  
Module 8: Managing Networking in Amazon EKS  
Review: Networking in AWS  
Communicating in Amazon EKS  
Managing your IP space  
Deploying a service mesh  
Preparing for Lab 5: Exploring Amazon EKS Communication  
Module 9: Managing Authentication and Authorization in Amazon EKS  
Understanding the AWS shared responsibility model  
Authentication and authorization  
Managing IAM and RBAC  
Demo: Customizing RBAC roles  
Managing pod permissions using RBAC service accounts  
Module 10: Implementing Secure Workflows  
Securing cluster endpoint access  
Improving the security of your workflows  
Improving host and network security  
Managing secrets  
Preparing for Lab 6: Securing Amazon EKS  
Module 11: Managing Upgrades in Amazon EKS  
Planning for an upgrade  
Upgrading your Kubernetes version  
Amazon EKS platform versions
